Wireless Access Point Controller

Managed access points must have a wireless controller that enables the wireless internet to work.

High Performance Computer Services offers two top-notch wireless controller options:

Unifi Cloud Controller

- The Most Frugal & Reliable Option -

Unifi Cloud Controller - \$10 per month or \$100 annual payment

-**High Performance Computer Services** partners with **Unifi** to provide technologically advanced software that's both reliable and secure.

-**Unifi Cloud Controller** immediately alerts *High Performance Computer Services* when a managed device begins faltering or an update is needed. The issue is then rapidly addressed by an experienced HPCS technician, directly from our office.

-**Updates are performed regularly** to assure quality wireless service with optimized security at all times.

-**Due to rapid updates and maintenance**, downtime is significantly minimized.

Services for Unifi Cloud Controller are included with monthly/annual package.

Local Controller

- Local Controller for Your Location -

Customer Based Unifi Access Point Controller - \$15 onsite fee plus \$85 per hour

-**Local controller is hosted at client location.**

-**Dedicated machine is needed** to host local controller.

-**Client will contact *High Performance Computer Services* when maintenance is needed.** Our skilled technicians then schedule a time to travel to customer location where they will provide necessary maintenance for the access point.

-**Updates are needed regularly** to keep the wireless connection smooth, reliable, and secure. This service is performed at customer location.

Average cost for maintenance is \$385 per year in addition to a dedicated hosting machine.
